

AndifWarp Version 1.1

An App to warp, distort and animate images.

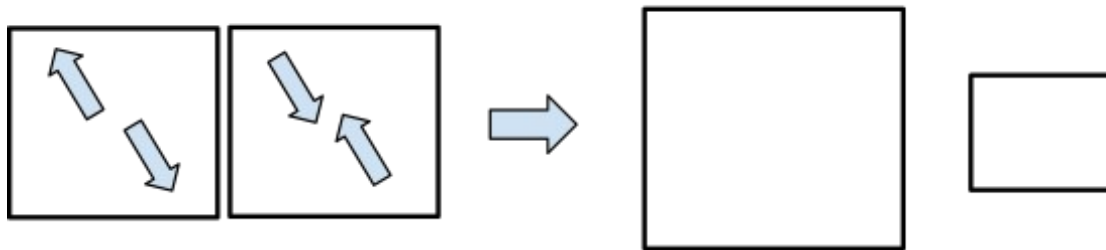

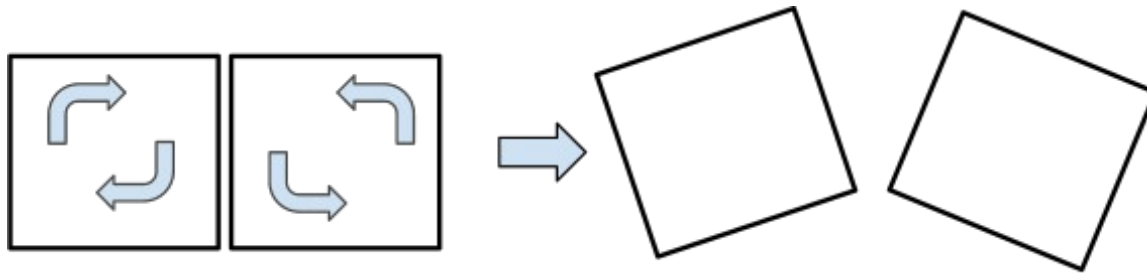

Rolf Geprägs Softwareentwicklung Hamburg/Germany

rolf@photiosity.com

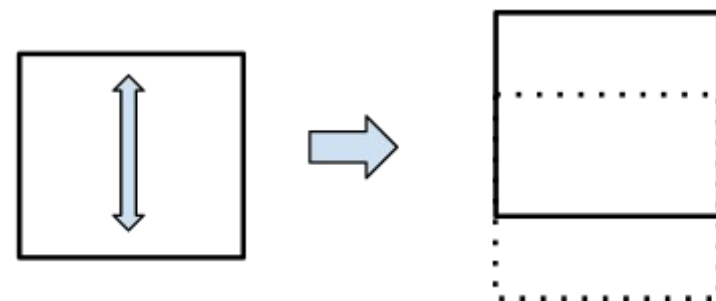

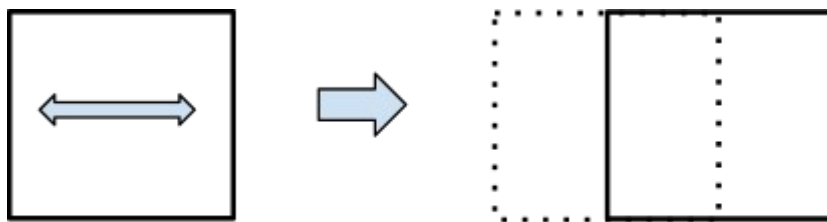

<http://www.photiosity.com/AndifWarp>

How to use AndifWarp – Work Area:

Multitouch:

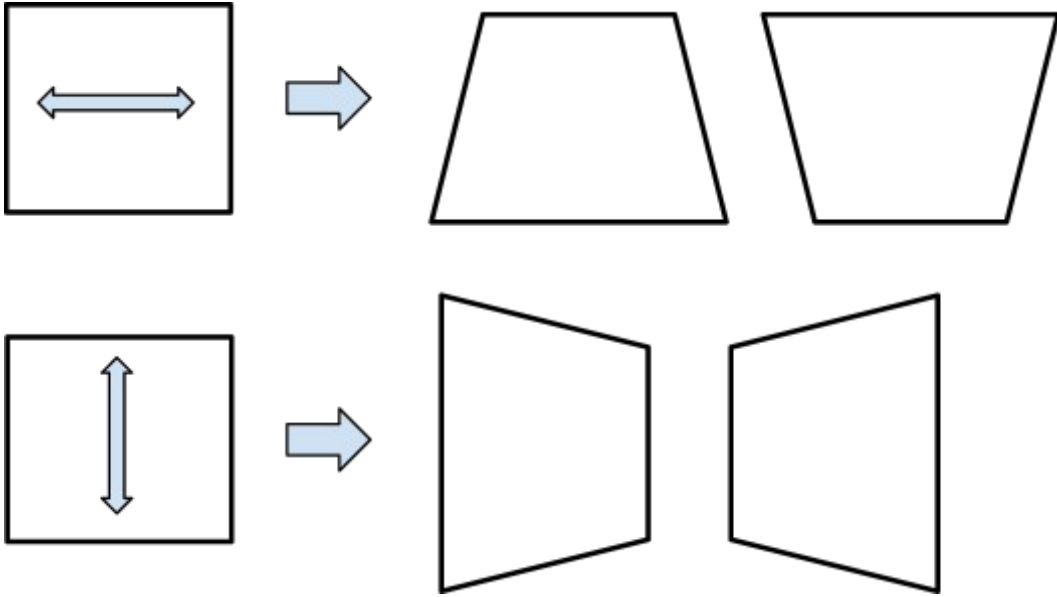

Moving:

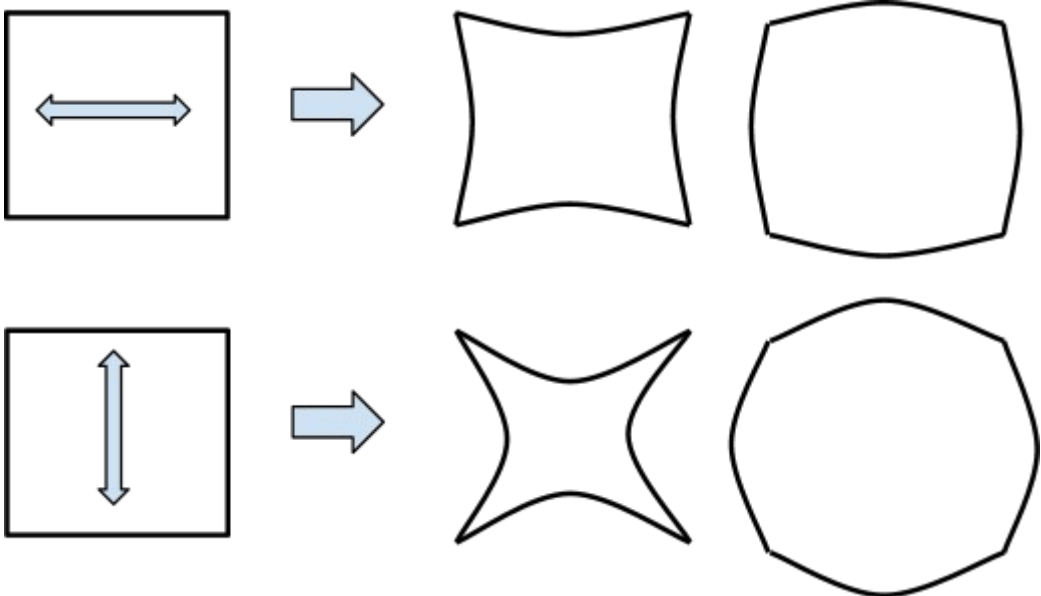

Move **Persp** Distort Warp

Perspective Distortion:

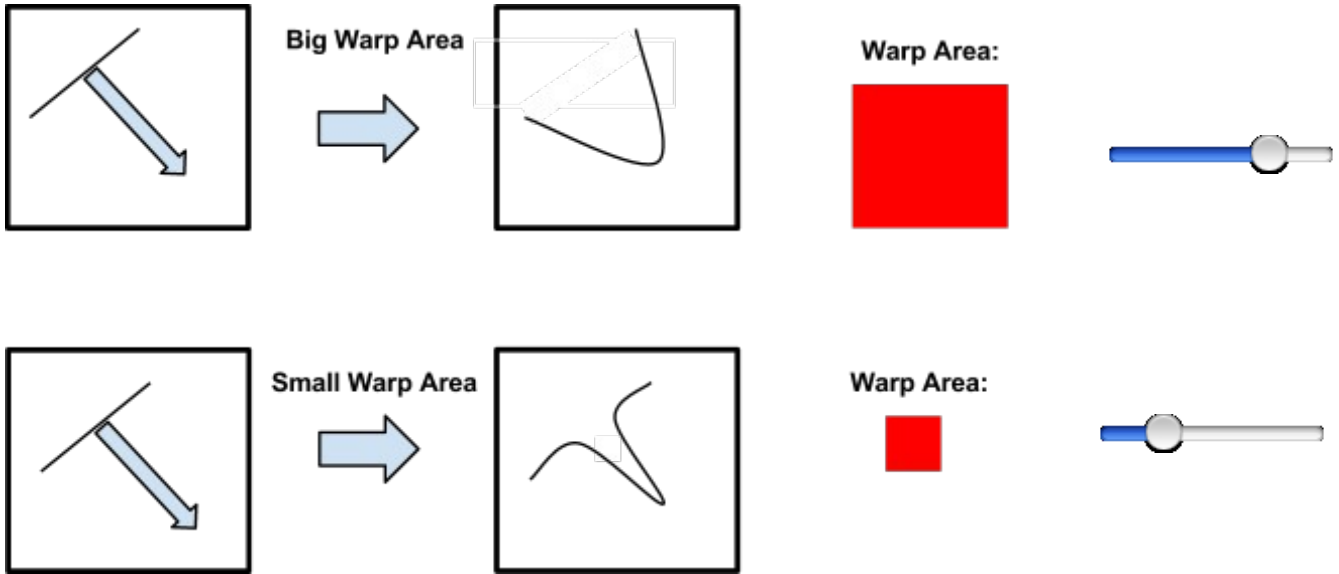

Move **Persp** **Distort** Warp

Fisheye Distortion:

Warping:

Undo / Redo / Reset:

Undo the last image processing step.

Undo the last Undo.

Reset – Undo all image processing steps.

All processing steps are saved independent from the loaded image, so you can reuse them on another image or dispose them by pressing Reset.

Double tapping in the work area activates the control page (only iPhone / iPod).

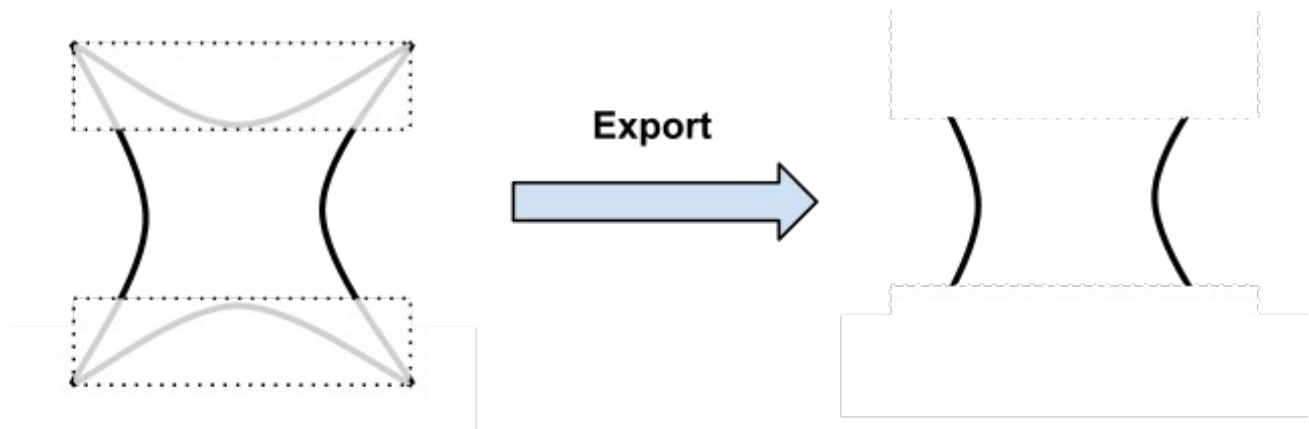

Add Work Area to the Movie

The movie consists of key frames which are interpolated during the export to get the desired movie duration. Hence the frames of the movie are interpolations between the key frames. With the command “Add Work Area” respectively “+” the current image is added to the movie as a new key frame.

How to use AndifWarp – Control Page:

Export Movie or Image to the Photo Gallery:

AndifWarp exports the marked visible area:

The aspect ratio of the exported movie or image remains the same as the ratio of the imported original image. The movie is exported as a MP4-File (H264) with 30 frames/second.

Duration of the exported Movie:

The movie length in seconds.

Add Work Area:

The movie consists of key frames which are interpolated during the export to get the desired movie duration. Hence the frames of the movie are interpolations between the key frames. With the command “Add Work Area” (iPad) respectively “+” (iPhone/iPod) the current image is added to the movie as a new key frame.

Preview Movie:

The movie is shown in the work area. It is only a rough preview – the quality of the exported movie is better. The duration of the preview is not connected to the duration set for the exported movie.

Delete all Frames:

All key frames of the movie are deleted.

Show Last Frame:

The last added key frame of the movie is shown in the work area.

Delete Last Frame:

The last added key frame of the movie is deleted.

Remarks

Exporting a movie is pretty time consuming. During the process the app should stay active in the foreground.

Changes in Version 1.1:

AndifWarp is now a universal App for iPad and iPhone.

Improvements in usability and performance.

Bug fixing.
